

# Furniture design and wireless charging combined: The Crossdock Wireless

Eindhoven - Dutch design label [Functionals](#) and [ZENS Wireless Charging](#) have combined their expertise to design a new product, [the Crossdock Wireless](#). The Crossdock Wireless, designed by [Dick van Hoff](#), is an attractive media rack offering convenient storage for your magazines and books while integrating the signature ZENS 'PuK'. In light of recent events, ZENS Wireless Charging and Functionals are proud to introduce the neatly designed Crossdock Wireless to the fast developing world of wireless charging.

**Old and new media combined into one: the media of today, for people who love Dutch design.**

"Antique" forms of communication like newspapers and magazines can peacefully co-exist with modern devices. The Crossdock Wireless' form and walnut wood reference the traditional Dutch magazine rack, while the white powder-coated aluminum base is firmly rooted in the present. Please check the [ZENS device-page](#) to see whether your device is compatible with the Crossdock Wireless or can be made compatible with it.

## About the collaboration

[Functionals](#) is a Dutch design label with a long and fascinating history, which believes that design is all about responding to needs, delighting the eye and standing the test of time.

**ZENS Wireless Charging** is a young and innovative company based in Eindhoven. Its vision is to enable all of us to stay connected with the latest technology, without the inconvenience of constantly low and empty batteries. [ZENS](#) develops solutions for smartphones, tablets and smartwatches to allow them to be charged wirelessly. So that empty batteries can be a thing of the past. As we [mentioned](#) earlier, all ZENS' solutions including [the Crossdock Wireless](#), work seamlessly with the brand new Samsung Galaxy S6 and Samsung Galaxy S6 Edge.

## About the PuK

The [PuK](#) is a wireless charger utilizing the Qi system (an industry-standard interface). Simply place your Qi tablet or smartphone on top of the PuK for effortless wireless charging so your battery will never run out.
